**Lead Beneficiary: PTV**

**Author(s): German Herrero, ATOS; Carmen Perea, ATOS; Luis Collar, ATOS; Jürgen Stolz, PTV; Florian Krietsch, PTV; Peer Siegemund, T-Systems; Ralf Grigutsch, T-Systems; Jon Högström, MYMO; Thierry Daguinos, NEOGLS; Ted Zotos, IRU**

Full deliverable available here: <http://aeolix.eu/deliverables/>

The present deliverable deals with the “AEOLIX toolkit”. The AEOLIX toolkit is a collection of software services and applications, which are publicly available through AEOLIX. To provide a service or an application through AEOLIX, the secured connectivity via AEOLIX has to be established first. Therefore, the MyAEOLIX SDK must be included into the communication design for the services and applications.

The present deliverable provides a description of toolkit services in the AEOLIX ecosystem and in MyAEOLIX. Furthermore, it addresses specifically service and application providers by:

- discussing integration options to connect existing software services with the AEOLIX system via the MyAEOLIX SDK,
- by providing detailed integration examples for an existing software service

Finally, a catalogue of currently available software services available via AEOLIX is presented.
